

Local Coastline

Alnmouth Beach - changes all the time

Depositional & Erosion - sometimes sand covers the concrete blocks and sometimes it is eroded and you can see the blocks.

Howick Beach
erosion landform

Holly Island - erosion landform

Bamburgh Beach - erosion landform

What we have learnt and talked about

Coasts - Where land meets the sea. The UK is an island so we are surrounded by coastline. Isla has been on holiday to Gran Canaria, Cyprus and Corfu. We looked at the beaches we have been to on google earth.

Erosion - takes away

Deposition - leaves behind

Erosion - by the sea (waves & Tide)

Erosion - by the weather (rain & wind)

Disposition - leaves rocks, sand and sediment

Type of rock effects erosion - soft rock like Clay and Chalk will erode quickly. Hard rock is hard to erode like granite.

Beaches have sand which is boulders and rocks eroded by the sea into tiny particles.
